JEREMY GILBERT

JUNIOR BIOLOGIST

NEW GRAPH ENVIRONMENT LTD.

May 12, 2022

DEAR HR MANAGER,

I would like to express my interest in joining your operation at the position of Junior Biologist. I recently received my bachelor's degree from the University of the Fraser Valley (UFV) while participating in relevant courses such as conservation, ecology, and programming. From reviewing the position requirements, I found that I align well with the needs and values your company is looking for.

Through education at UFV I became well-versed in sustainability and management of resources. One of my projects included monitoring the health and transition of a creek over a set amount of time. This included, taking water quality samples, counting specimens, estimating canopy cover, and other measures.

My personal understanding of the biophysical environment and environmental management has also been grown outside of classrooms. I have spent all my summers exploring the Interior and Coastal ecosystems of BC and possess extensive knowledge of the ecosystems of our province.

I am physically fit and self-motivated with plenty of outdoor experience. Moreover, I am a member of BC's College of Applied Biology, I have comprehensive knowledge of Microsoft Office, and possess some basic programming skills from C++. I would love to meet with you to further discuss my qualifications and interests in joining your operations.

Thank you for your consideration.

Sincerely,

Jeremy Gilbert
